

# An overview

Enterprise AI, Blockchain & Cybersecurity solutions built for measurable outcomes, governance, and reliability.

## AI

Digitisation • Automation •  
Infrastructure Intelligence • Data  
Centres

## Blockchain

Tokenisation • Provenance • Smart  
Contracts • Identity primitives

## Cybersecurity

Access governance • Auditability •  
Risk controls • Incident readiness

Nija builds production-grade systems using standard reference architectures, governance controls, and measurable KPIs - designed to integrate with existing enterprise and institutional environments.

**Key offerings:** Tokenisation • Supply Chain • Identity • Loyalty • Digital Assets Advisory • RWA Liquidity • AI Data Centres

# Capabilities

Nija delivers enterprise transformation through three pillars. Each pillar is designed for governance, auditability, and operational reliability.

## AI

- AI for Digitisation
- AI for Automation
- AI for Infrastructure Intelligence
- AI for Data Centres

## Blockchain

- Tokenisation frameworks
- Audit trail & provenance
- Smart contracts & settlement
- Identity & access primitives

## Cybersecurity

- Threat detection & triage enablement
- Identity security & access governance
- Policy/compliance controls
- Incident response workflows

# Solutions Portfolio

Solution portfolios designed for enterprise deployment and measurable outcomes.

### Tokenisation

Compliant tokenised assets and workflows with governance controls and audit-ready reporting.

### Supply Chain

End-to-end traceability with verifiable handoffs, dispute workflows, and evidence exports.

### Identity Management

Verifiable credential lifecycles with RBAC, approvals, revocation controls, and audit trails.

### Loyalty

Transparent rewards with policy-driven promotions, fraud controls, and finance-ready reporting.

### Digital Assets Advisory

Research-driven guidance, risk frameworks, governance-ready outputs, monitoring and reporting.

### RWA Liquidity

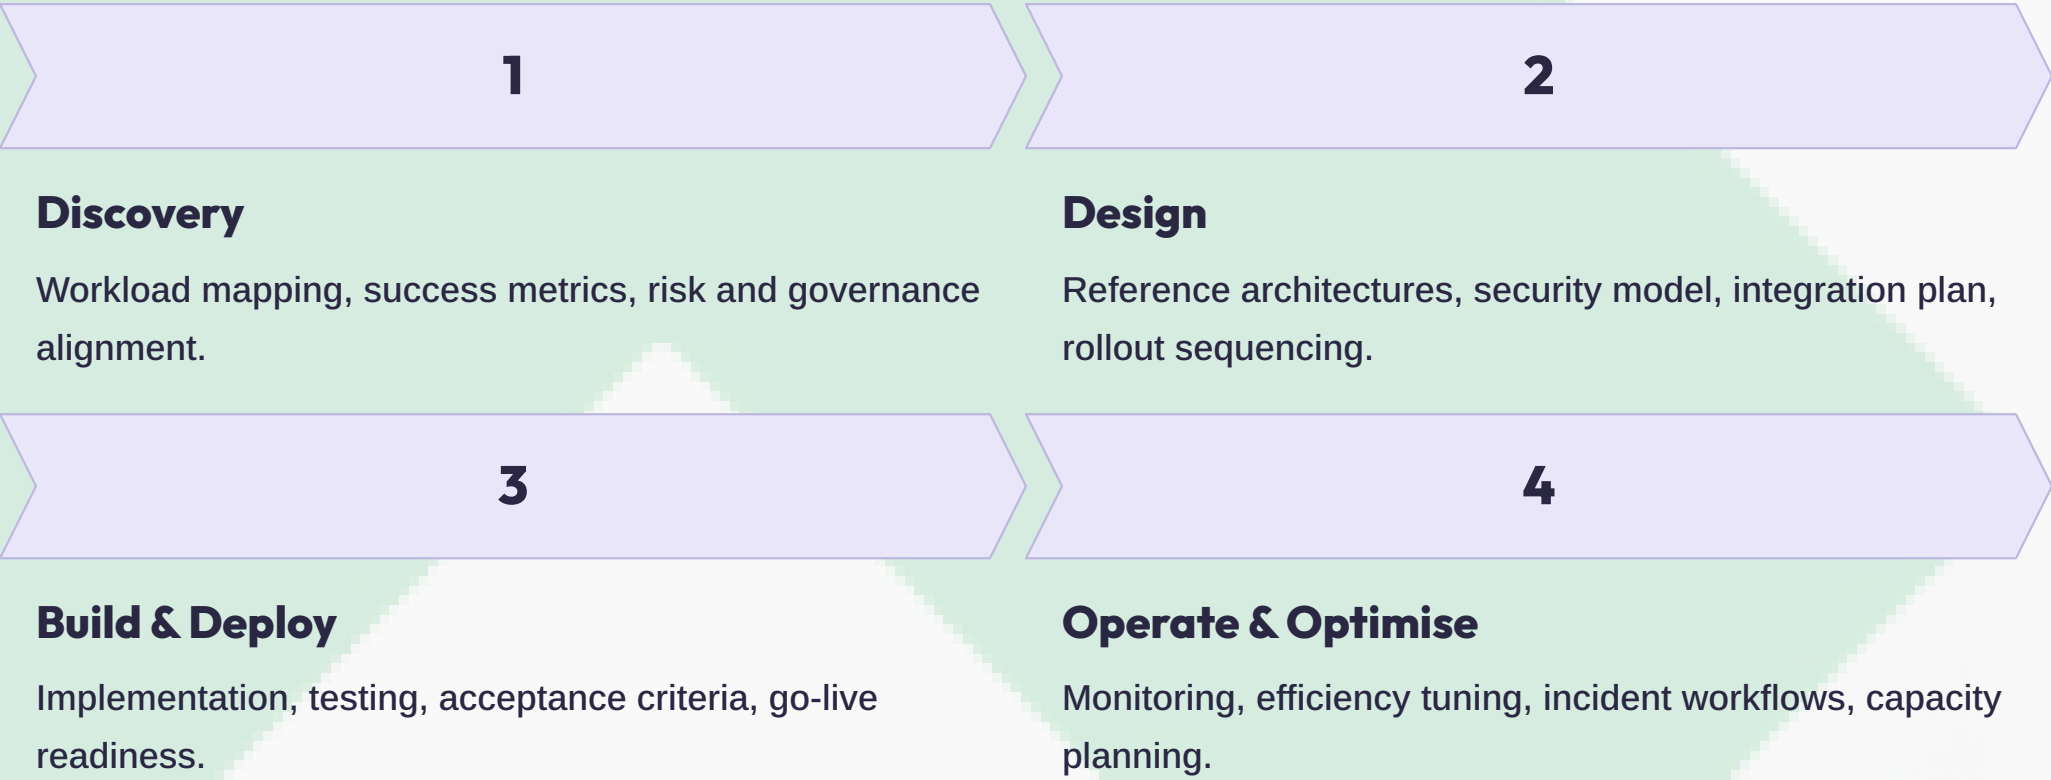

Eligibility gating, transfer restrictions, RFQ/OTC workflows, settlement and reporting.

### AI Data Centres

Consulting and turnkey AI mini data centres: tiered scaling, efficiency, security-first governance.

# Delivery Model

We deliver each solution through a consistent, governance-first model. **Discovery** aligns objectives, constraints, success metrics, and risk posture. **Design** produces reference architectures, policy controls (RBAC/eligibility/limits), integration plan, and reporting requirements. **Build & Deploy** implements workflows (issuance/traceability/credentials/rewards/RFAQ settlement), dashboards, audit logs, and acceptance testing. **Operate & Optimise** establishes monitoring, exception handling, periodic reviews, and continuous tuning for reliability, compliance readiness, and measurable outcomes.

## AI Data Centres: Consulting + Turnkey

A dedicated domain under AI, focused on hardware-first optimisation, standard reference architectures, and governance-first execution—from campus-scale deployments to high-sensitivity environments.

### Consulting Blueprint (3 Phases)

### Representative Outcomes (Examples)

|                          |                                |                                             |                            |
|--------------------------|--------------------------------|---------------------------------------------|----------------------------|
| ↓30–45%                  | ↑15–25%                        | ↓20–40%                                     | ↓25–50%                    |
| <b>Time-to-go-live</b>   | <b>Utilisation consistency</b> | <b>Power/cooling OPEX</b>                   | <b>Thermal throttling</b>  |
| University Tier-1 launch | University Tier-1 launch       | Green optimisation upgrade (site-dependent) | Green optimisation upgrade |
